

TWISTER 1000

Line connection? Anytime! Just as you need it!

Whether fresh, cooked or tempered - the dicer TWISTER 1000 is the powerful specialist for calibrated products. The machine cuts products up to a length of 1000 mm into precise cubes, strips or discs. Grating belongs to its dicing range as well. In one hour TWISTER 1000 achieves a capacity of max. 4,5 t (depending on product and application).

TWISTER 1000 combines high resilience and powerful cutting results with easy handling and operator convenience from loading to cleaning. Different line solutions are possible up to fully automatic loading and redirection of the cut product to the multihead scale. Sophisticated technology is the basis for optimum cutting conditions. The blade speed e.g. can be flexibly adjusted to product and application (FlexRotationSystem, 100 to max. 400 rpm).

The optimum for your applications

TREIF's special dicing technologies are available for TWISTER 1000 as well. The hygiene cylinder and the „vartronic“ technology are standard. Due to the „vartronic“ technology the machine is able to adapt its cutting tools if products are e.g. too hard.
