

Metal detection system Mitus®

Reliable inspection in challenging applications

! Benefits

- Maximizes safety for food production due to highest detection sensitivity
- Real Multi-frequency tolerates fluctuations in product effects
- High operational comfort, connectivity and design variety
- Durable, robust design

Mitus® is a real multi-frequency metal detection system that prevents contamination of tiniest metal particles in a product flow. Mitus® analyzes multiple electromagnetic frequencies simultaneously to provide the highest sensitivity and prevent false rejects even with unstable product effects. All Mitus® metal detectors thus ensure maximum product safety and output.

Maximised product safety, minimised false rejects

- ! Excellent detection capability of **ferrous, non-ferrous metals, light metal alloys** such as **stainless steel** and **aluminum**.
- ! The basic interface **facilitates user input**. Numerous connection options, interfaces and designs available.
- ! Automatic **learn-mode** and reduction of product effect.
- ! Robust **stainless steel housing** and maximum protection for wash-down applications.

The right solution for all of these applications:

Foreign object
detection

Metal detection system Mitus[®] properties and performance limits

Category	Description
Supply voltage	90 V ... 260 V
Mains frequency	47 Hz ... 63 Hz
Power consumption	45 VA (power supply up to max.120 VA)
Relay outputs	4 relays Relay 1, 3 and 4: freely programmable Relay 2 'Error': fixed assignment
Product speed	2 cm/s ... 20 m/s
Product temperature	-30 °C to +55 °C
Ambient temperature	Operation: -10 °C to +55 °C Storage: -10 °C to +70 °C
Relative air humidity	Operation: < 58% at +55°C Storage: < 30% at +70°C
Housing	1.4301 stainless steel
Protection class	IP65
Weight	See table for dimensions and weights of the relevant equipment
Maximum cable lengths between the equipment	Mitus [®] T to Mitus [®] H: 30 m Mitus [®] E to Mitus [®] R or Mitus [®] S: 10 m Mitus [®] T to Mitus [®] EI: 30 m Mitus [®] EI to Mitus [®] R or Mitus [®] S: 10 m

The properties and performance limits stated here apply for all Mitus[®] series equipment.

c Weight in kg

All information excludes any optional devices which may have been installed; values (b and c) are approximate values.

*1 Size available on request

Metal-free zone

Metal detection disturbances can lead to false rejects errors or a deterioration in sensitivity, therefore it is important to observe the search coil's 'metal-free zone'.

Examples of potential disruptive factors in this zone include:

- Large metal objects such as housing, frames or tables
- Movable metal objects such as oscillating scaffolding or screwed-on frefall pipe fittings
- Cross-connections of the supporting structure forming short circuit coils
- Metal objects worn by employees (e.g. keys, glasses, jewellery, mobile phone)
- Every customer keeps a clip board and their test pieces on top of the coil.

Follow the guideline below to maintain compliance with the metal-free zone.

Metal-free zone for metal detectors with rectangular aperture (Mitus® C / H / S):

The size of the metal-free zone depends on the opening C of the metal detector as well as the type of metal. The following information serves as minimal guide values and can strongly deviate depending on installation location.

Model	Magnetic Steel (e.g. parts of Fe, black-belt structures)		Non-magnetic Steel (e.g. parts of VA 1.4301, AL, stainless steel belt structures)	
	Before and Behind	Below and Above	Before and Behind	Below and Above
Mitus® C	2.0 × C	1.0 × C	1.5 × C	1.0 × C
Mitus® H	2.0 × C	1.0 × C	1.5 × C	1.0 × C
Mitus® S	2.0 × C	1.0 × C	1.5 × C	1.0 × C

All values for C in tables above.

All information excludes any optional devices which may have been installed.

Metal-free zone for metal detectors with round aperture (Mitus® R / RMFZ):

If moveable elements made of aluminum or stainless steel (VA 1.4301) are operated around the metal detector, the metal-free zone must be maintained above and below the metal detector. The size of the metal-free zone depends on the nominal diameter C of the metal detector as well as the type of metal. The following information serves as minimal guide values and can deviate depending on installation location.

Installation recommendation of Mitus® R
in a tubular bag machine

Model	Magnetic Steel (e.g. parts of Fe)		Non-magnetic Steel (e.g. parts of VA 1.4301, AL)	
	Non-moving	Moving	Non-moving	Moving
Mitus® R	$1.2 \times C$	$2.0 \times C$	$0.80 \times C$	$1.5 \times C$
Mitus® RMFZ	$1.0 \times C$	$1.5 \times C$	$0.64 \times C$	$1.2 \times C$

All values for C in tables above.

All information excludes any optional devices which may have been installed.

Options

A wide range of options increases your possibilities

- Signal lights and signal horn
- Monitoring functions (e.g. air pressure, reject, product flow)
- Remote product change
- USB printing
- Fingerprint sensor

We offer a comprehensive range of certified test pieces in a variety of materials and sizes to ensure an accurate and consistent in-field validation of our metal detectors. Within a metal detector package, we provide 2 standard test pieces for a validation of the basic sensitivity. During the order process customers can choose to change the type or add additional test pieces. All test pieces are made of FDA approved materials.

Metal detection system Mitus® interfaces

- SPC@Enterprise
- RS 232, RS 422
- Profibus
- Remote control

SPC@Enterprise

The pre-packaging and statistical process control software SPC@Enterprise helps you guarantee product quality, food safety and productivity.

The proven software offers configurable interfaces for recording data from a wide variety of machines, equipment and sensors in the processing or packaging line. It transforms this data into information via powerful and comprehensive reporting functions, making it possible to intervene quickly in the production process.

The products and solutions presented in this data sheet make major contributions in the following sectors:

The technical data given serves as a product description only and should not be understood as guaranteed properties in the legal sense.

Specifications subject to change without notice.
